Intelligent Resources. 

The optimal connection of PUR and silane adhesive technologies.

The all-new STP technology of UZIN MK 200 ideally combines the benefits of one-component PUR and silane adhesive technology. With the best-possible ridge hardness wood deformations are kept to an absolute minimum. This results in technically perfectly laid surfaces with an optically sophisticated, homogenous appearance. Adhesive residues can be easily removed from the wood flooring surface.

≡ 1-COMPONENT STP WOOD FLOORING ADHESIVE

UZIN MK 200
Silane-terminated energy-elastic adhesive for wood flooring

- + Best ridge hardness
- + Excellent spreading properties
- + Long laying time, rapid grab
- + High filling capacity
- + Can be smoothed as early as 12 hours later
- + Suitable for all wood flooring types
- + Adhesive residues easy to remove
- + Solvent-free and water-free
- + GISCODE RS 10 – solvent-free, methoxysilane compound
- + EMICODE EC 1 R/Very low emission

Item no.	Unit size	Package size/ Pallet	Consumption	Color
59678	16 kg drum	33	ca. 800-1200 g/m ²	beige

The time has come for UZIN STP wood flooring adhesives.

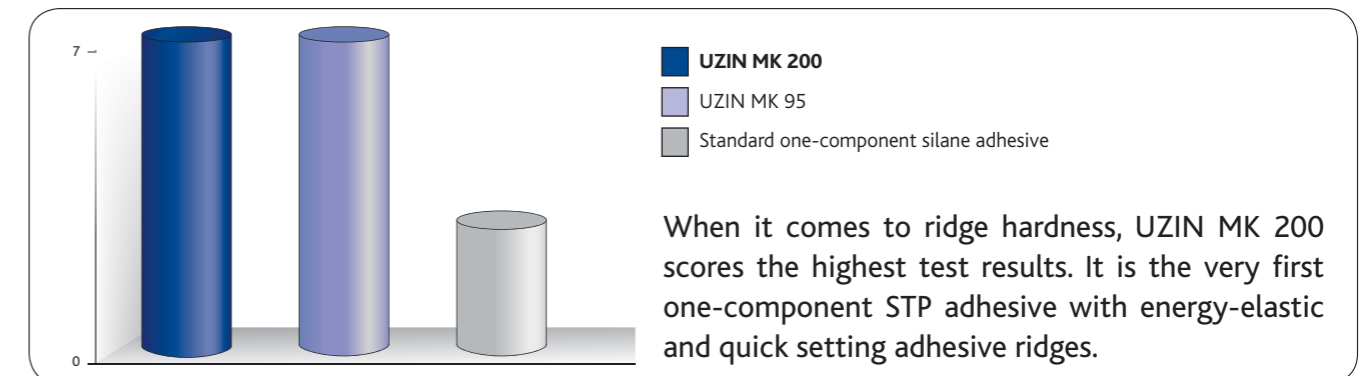

A new era of parquet life

"For years now, UZIN has been offering wood flooring adhesives whose ridge hardness is second to none in the market. UZIN MK 95, a UZIN innovation with PUR adhesive technology was long unmatched, not even to be surpassed by UZIN MK 100. In contrast, adhesive products with silane adhesive technology have a clearly lower performance range. They can however eliminate some minor PUR drawbacks, such as the somewhat more difficult and extensive processing. This is why we have put major effort in combining the best of both adhesive technologies. And now we have succeeded: The new one-component STP adhesive technology is ready. A new era of parquet life can begin!"

Ridge hardness put to the test

UZIN Lab Know-How

The UZIN research team has succeeded in optimally combining and synergizing decades of proven polyurethane performance with the work-safety-related benefits of silane adhesive technology. By implementing an innovative bonding-hybrid technology, entirely new standards were set for the key application criteria ridge hardness, speed and spreadability.
